GO:BP enrichment ... top 3 terms per cluster
(background: whole genome)
regulation of actomyosin
structure organization
cardiac muscle cell
differentiation
regulation of actin
cytoskeleton organization
positive regulation of
neuron differentiation
regulation of cell−matrix
adhesion
neuron migration
negative regulation of
stress fiber assembly
filament bundle
assembly
fear response
positive regulation of
cell−matrix adhesion
plasma membrane
adhesion
regulation of steroid
molecules
metabolic process
positive regulation of MAPK
kinase activity
positive regulation of
cell−substrate adhesion
cell−cell adhesion via
camera−type eye
plasma−membrane
adhesion
neuron projection
positive regulation of
steroid biosynthetic
biosynthetic process
glycolipid biosynthetic
process
insulin receptor
signaling
pathway
