GO:BP enrichment ... top 5 terms per cluster
(background: whole genome)
regulation of actomyosin structure organization
cardiac muscle cell differentiation
regulation of actin cytoskeleton organization
glomerulus morphogenesis
regulation of sarcomere organization
cell junction assembly
positive regulation of neuron differentiation
regulation of cell−matrix adhesion
neuron migration
regulation of cell−substrate adhesion
cell−matrix adhesion
negative regulation of actin filament bundle assembly
fear response
positive regulation of homophilic cell adhesion via plasma membrane adhesion molecules
cell−matrix adhesion
regulation of steroid metabolic process
positive regulation of MAPK cascade
kinase activity
positive regulation of cell−substrate adhesion
epithelial cell proliferation
retina development in camera−type eye
regulation of MAPK cascade
cell−cell adhesion via plasma−membrane adhesion molecules
cognition
negative regulation of neuron projection development
negative regulation of cell organization
positive regulation of steroid biosynthetic process
positive regulation of lipid biosynthetic process
positive regulation of steroid metabolic process
positive regulation of lipid metabolic process
learning
negative regulation of sprouting angiogenesis
glycolipid biosynthetic process
glycolipid metabolic process
liposaccharide metabolic process
negative regulation of insulin receptor signaling pathway
cellular response to fatty acid
negative regulation of heart rate involved in cardiac conduction
systemic arterial blood pressure
alpha−beta T cell activation
