GO:BP enrichment ... top 5 terms per cluster
(background: all SCENIC+ regulon targets)
regulation of actomyosin structure organization
cardiac muscle cell differentiation
regulation of actin cytoskeleton organization
regulation of supramolecular fiber organization
hippocampus development
positive regulation of neuron differentiation
regulation of cell−matrix adhesion
regulation of endopeptidase activity
positive regulation of cell−matrix adhesion
regulation of cellular component organization
regulation of lipid metabolic process
neuron migration
regulation of steroid metabolic process
cell−matrix adhesion
fear response
negative regulation of angiogenesis
negative regulation of vasculature development
negative regulation of blood vessel morphogenesis
regulation of lipid biosynthetic process
epithelial cell proliferation
T cell differentiation
positive regulation of MAP kinase activity
positive regulation of cell−substrate adhesion
retina development in camera−type eye
regulation of anatomical structure size
regulation of MAP kinase activity
cell−cell adhesion via plasma−membrane adhesion molecules
Ras protein signal transduction
regulation of calcium−mediated signaling
positive regulation of lipid biosynthetic process
positive regulation of lipid metabolic process
post−transcriptional regulation of gene expression
glycolipid biosynthetic process
glycolipid metabolic process
liposaccharide metabolic process
membrane lipid biosynthetic process
mRNA catabolic process
regulation of mRNA catabolic process
alpha−beta T cell activation
