GO:BP enrichment ... top 3 terms per gene cluster
(STAT3 targets, WT, ARC clusters 0/3/17)
regulation of actomyosin structure organization
cardiac muscle cell differentiation
regulation of actin cytoskeleton organization
positive regulation of neuron differentiation
regulation of cell−matrix adhesion
neuron migration
negative regulation of
stress fiber assembly
filament bundle assembly
fear response
homophilic cell adhesion via plasma membrane adhesion molecules
cell−matrix adhesion
regulation of steroid metabolic process
positive regulation of MAPK cascade
kinase activity
positive regulation of cell−substrate adhesion
camera−type eye development
cell−cell adhesion via plasma−membrane adhesion molecules
negative regulation of neuron projection development
positive regulation of steroid biosynthetic process
biosynthetic process
glycolipid biosynthetic process
insulin receptor signaling pathway
