GO:MF ... top 5 terms per cluster
(background: whole genome)
peptide hormone binding
protease binding
hormone binding
protein heterodimerization activity
phosphatidylinositol bisphosphate binding
DNA-binding transcription activator activity, RNA polymerase II-specific
DNA-binding transcription repressor activity, RNA polymerase II-specific
PDZ domain binding
cell adhesion molecule binding
signaling receptor complex adaptor activity
signaling adaptor activity
JUN kinase kinase kinase activity
vinculin binding
lipid kinase activity
cadherin binding
GTPase binding
calcium channel activity
metalloendopeptidase activity
metallopeptidase activity
general transcription initiation factor binding
hydrolase activity, hydrolyzing O-glycosyl compounds
hydrolase activity, acting on glycosyl bonds
axon guidance receptor activity
glycosyltransferase activity
UDP-glycosyltransferase activity
hexosyltransferase activity
ATP-dependent diacylglycerol kinase activity
glycosphingolipid binding
G protein-coupled amine receptor activity
quaternary ammonium group binding
LRR domain binding
microtubule motor activity
xylosyltransferase activity
primary miRNA binding
semaphorin receptor activity
