GO:BP ... top 5 terms per cluster
(background: whole genome)
regulation of actomyosin structure organization
cardiac muscle cell differentiation
regulation of actin cytoskeleton organization
glomerulus morphogenesis
regulation of sarcomere organization
cell junction assembly
positive regulation of neuron differentiation
regulation of cell−matrix adhesion
neuron migration
regulation of cell−substrate adhesion
cell−matrix adhesion
negative regulation of actin filament bundle assembly
fear response
positive regulation of homophilic cell adhesion via plasma membrane adhesion molecules
regulation of steroid metabolic process
positive regulation of MAPK cascade
positive regulation of kinase activity
epithelial cell proliferation involved in camera−type eye development
cell−cell adhesion via plasma−membrane adhesion molecules
negative regulation of neuron projection development
positive regulation of steroid biosynthetic process
positive regulation of lipid biosynthetic process
steroid metabolic process
positive regulation of lipid metabolic process
learning
negative regulation of sprouting angiogenesis
glycolipid biosynthetic process
glycolipid metabolic process
liposaccharide metabolic process
insulin receptor signaling pathway
cellular response to nitrogen starvation
negative regulation of heart rate involved in cardiac conduction
alpha−beta T cell activation
